

Session-15 Method overriding

Thursday, August 25, 2022 4:31 PM

What is Method Overriding

If subclass (child class) has the same method definition as declared in the parent class, it is known as method overriding in Java.

Example

Rules for Java Method Overriding

1. The method must have the same name as in the parent class.
2. The method must have the same parameter as in the parent class.
3. A method declared final cannot be overridden.
 - A method declared static cannot be overridden.
 - The access level cannot be more restrictive than the overridden method's access level.
